

ARTWORK FILE TRANSFER GUIDELINES

When sending your artwork by email, **Please Do not compress your files with WinZip or Stuffit.**

We operate in a PC environment and all Mac files must be converted for use on an IBM platform. Whenever possible, please provide your artwork in "**Vector**" format created in the programs listed below. Vector is the best type of art to use in our application of printing.

Please save your electronic artwork in Corel Draw 13 or earlier version saved with a **.cdr** extension or Adobe Illustrator CS 10 or earlier version, saved with the extension **.ai** or **.eps**. **All fonts/text must** be converted to Curves - for Corel Draw and create Outlines - for Illustrator. All art must be on one layer and not locked.

We have some success with AutoCAD files but cannot guarantee that your files will be read properly on our system. Most times files can be translated without any conflicts.

Files created in **Quark Express** are not accepted because we cannot read them.

If for some reason your files cannot be read, we will work with you to find a solution.

If you need any further guidance please contact the Vision Screen Print art department at 519-342-0966 and they will be happy to assistance you.
